

Venomous Snakes (Only 4 species in Texas)

Water Moccasin

Copperhead

Rattlesnake

Coral Snake

Most commonly seen Non-Venomous Snakes

Rat Snake

Brown Snake

Yellow Bellied Water Snake

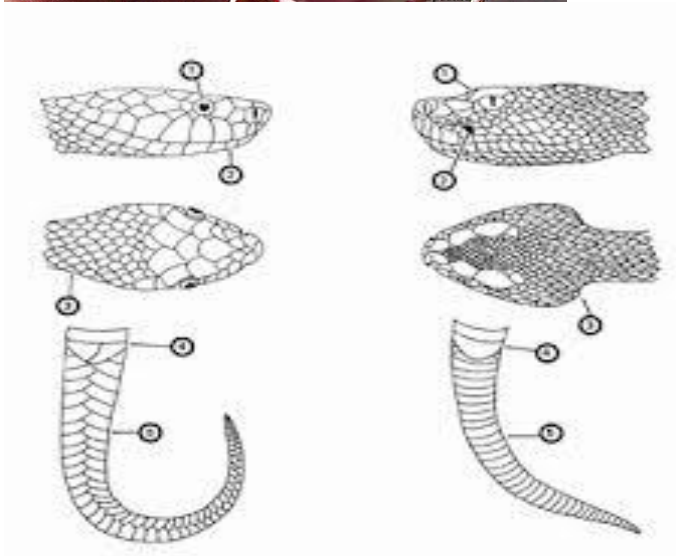

Garter Snake

Rough Earth Snake

These tiny Earth Snake are commonly seen in water meters, under shrubs, and anywhere the ground is cool, moist/wet, and dark. Their primary diet consists of insects and or spiders. They are good snakes to have around and are harmless to humans or pets.

Often times telling the difference between Venomous and Non-Venomous snakes is not an easy task for the average person. The pictures on the left are characteristic of Non-Venomous and the right is Venomous. Venomous snakes are ground dwellers, they do not climb. You will not see them in trees, attics, or porch eaves. Anywhere the snake would have to climb.
